

I build **agentic systems that survive production** — multi-agent orchestration, LLM pipelines, evals, and fine-tuned local models. **Founded and exited Sentio** (autonomous onchain-security agents), and wrote **tracekit**, an open-source toolchain that turns coding-agent traces into a local model. The reliability instincts come from Rust and C++ trading infrastructure at WhiteBeard, where a dropped message costs money. Ship in TypeScript, Python, Rust, C++, Go & Solidity.

§ 01 EXPERIENCE

Apr 2025 — Present

Remote · IST

SYSTEMS

WhiteBeard AI

SYSTEMS ENGINEER

- Own the production trading stack end to end: **C++ MT5 plugins, Rust microservices** (order & log ingestion, relay servers, analytics), and TypeScript orchestration backends.
- Built the **Quantum Control Plane** (Rust orchestration — terminal registration, order routing, log ingestion) and the Abby trading platform with its Rust relay servers to MT5 plugins.
- Glued the system together with NATS messaging, Datadog observability, PostgreSQL, AWS Secrets Manager, and onchain invoicing (Ethers.js + Prisma + AMQP). **Everything is async, everything can fail** — this is where the reliability discipline comes from.

Sep 2025 — Jun 2026

Remote · IST

AGENTIC AI

Elcara

FOUNDING ENGINEER

- Built the **agentic AI infrastructure from zero** across 30+ repositories — multi-agent orchestration over shared context pipelines, with streaming responses and human-in-the-loop review.
- Shipped **Juriqa**, a multi-agent legal-document analysis platform (specialised agents, shared context, auth, streaming) and **ReplyDash**, an LLM reply engine delivered as a Chrome extension with per-user quotas and freemium billing.
- Built content and market-intel pipelines: a video/PDF-to-draft generation chain, Resolved Markets (real-time orderbook tracking, TypeScript + WebSocket), and Poly Ranker (Polymarket wallet scoring, Python + FastAPI + Redis).

2024 — 2025

Founded & Exited

PRODUCT

Sentio

FOUNDER — PRODUCT & ENGINEERING

- **Founded, built, and exited** Sentio — autonomous security agents for AO smart contracts, from problem selection through the exit.
- Designed the two-layer model: pre-deployment code audits, then **Sentinels** — autonomous agents that continuously monitor deployed contracts, flag anomalous behaviour, and alert in real time. Audit results written onchain as immutable atomic assets.
- Owned the whole surface: problem selection, product positioning, engineering, and ecosystem partnerships with Betteridea and Veritas. Backed by a **\$5K Arweave grant** and three hackathon placements.

Jan 2026 — Present

heyvena.com

HARDWARE

Vena

COFOUNDER

- Cofounder of a **coin-sized health sensor** that hides behind the analog watch you already wear — PPG-based sensing (MAX86141-class front-end, 100 Hz) for heart rate, SpO₂, HRV, sleep, and skin temperature over BLE.
- Run hardware R&D (industrial design, layer architecture, wrist-back optical proof-of-concept), brand identity, and the cinematic 3D waitlist site (Next.js + React Three Fiber, scroll-driven product film).

§ 02 SELECTED PROJECTS

tracekit

OPEN SOURCE

Mines your coding-agent logs, keeps the edits that shipped, and QLoRA-tunes a small model that runs offline. 8-stage pipeline with secret scrubbing, held-out evals, and an OpenAI-compatible endpoint. 8.5M words → Qwen2.5-Coder-0.5B, loss 2.90→0.93, ~31% of edit calls routed locally at 67 tok/s.

Python · QLoRA · Ollama · GGUF

Juriqa

ELCARA

Multi-agent legal-document analysis platform. Specialised agents over a shared context pipeline with auth and streaming responses; built the orchestration layer end to end.

Multi-agent · LLM · Next.js

Sentio

FOUNDER · EXITED

Autonomous security agents for AO smart contracts. Pre-deploy audits plus Sentinels that monitor deployed contracts and escalate only on real anomalies; audit results stored onchain as atomic assets.

Agents · TypeScript · Lua · AO

ReplyDash

ELCARA

LLM reply engine shipped as a Chrome extension — reads post context on LinkedIn / X and generates an in-voice reply in one click. Tone control, per-user quotas, freemium billing.

LLM · Chrome Ext · Quotas

Quantum Control Plane

WHITEBEARD

Rust orchestration layer over the whole trading ecosystem — terminal registration, order routing, log ingestion, analytics. The control-plane shape an agent fleet needs, with money on the line.

Rust · NATS · PostgreSQL

Weatherbot

OPEN SOURCE

Autonomous agent trading weather markets on Polymarket. Forecast ingestion, expected-value filtering, and Kelly-criterion sizing — acts only when the edge clears the threshold, stands down otherwise.

Python · Kelly · EV Filtering

§ 03 SKILLS

LLMS & AGENTS	Claude / Anthropic API · OpenAI · Multi-agent orchestration · Tool calling · MCP · Streaming / SSE · Structured outputs · Evals · RAG
MODEL WORK	QLoRA / PEFT · Fine-tuning · Ollama · GGUF / quantization · Local inference · Embeddings
LANGUAGES	TypeScript · Python · Rust · Go · C++ · Solidity · Node.js
FRAMEWORKS	Next.js · React · FastAPI · Fastify · Express · Prisma · React Three Fiber · Anchor
DATA & INFRA	PostgreSQL · Redis · MongoDB · Supabase · NATS · Docker · Kubernetes · AWS · Datadog · CI/CD
ONCHAIN	Solidity · DeFi protocols · Arweave / AO · Stellar · Cronos · Ethers.js

§ 04 ACHIEVEMENTS

Jun 2025	Core Dev Recognition — Ecosystem Launch / WhiteBeard Trading	Feb 2025	First Place — ITM Hackathon / ITM University
Oct 2024	\$5,000 Grant — India Launchpad / Arweave · Sentio	Aug 2024	Third Place — Weavers Raid III / Arweave · Sentio
Jul 2024	Top 30 — HackerHouse II / Arweave · Sentio	May 2024	Second Place — Stellar Indiathon / Stellar Networks
Apr 2024	\$2,000 Bounty — Illuminati Hackathon / ITM University	Feb 2024	Research Paper — AI Fusion Conference / ITM University
Jan 2024	First Place — Local Governance Hackathon / ITM University		

§ 05 EDUCATION

2022 – 2026	ITM University
Vadodara, IN	B.Tech, Computer Science
	Focus on systems, distributed computing, and applied cryptography. Active in the hackathon scene, with multiple wins across blockchain, AI, and governance categories.
